## OHP Clinical Best Practice Guidelines

QHP created our first Clinical Best Practice Guideline, topic is BP Control. (See attached) This is an education tool for QHP—more topics to come!

AMA MAP (**M**easure Accurately, **A**ct Rapidly, **P**artner with Patients) is a guide for improved management and prevention of cardiovascular disease

- Designed to achieve improvement in clinical outcomes, and rapid sustainable improvements in hypertension control
- Upon reviewing AMA MAP guidance, Dr. Oestmann created a three-part summary document including the provider's role, patient's role, and nursing/clinical staff's role. This will serve as education for QHP organizations. It is not required but offered as a tool.

*A Physician-Hospital Organization (PHO) is a joint venture between physicians and a hospital/system that is authorized to contract with payers. A clinically integrated PHO is one that uses systems and processes to improve quality and reduce cost through evidence based medicine, performance measurement, information sharing, and alignment of incentives.*
